AI-Generated Remediation Roadmap

Security Summary (Offline Analysis)

The assessment identified a total of 1 findings.

Severity breakdown:

- Critical: 0
- High: 0
- Medium: 1
- Low: 0

The average CVSS score across all findings is 6.5.

Overall Risk Assessment: MEDIUM

The results indicate potential weaknesses primarily related to service exposure, configuration issues, or missing security controls. No exploitation was performed.

Recommended Actions:

- Address higher severity findings first
- Review exposed services and headers
- Apply secure configuration baselines
- Perform periodic reassessments
